Introduction

Company Overview

Fresenius Medical Care AG & Co. KGaA (“FMC-AG & Co. KGaA,” the “Company,” “we,” “us,” or “our”), a German partnership limited by shares, is the world’s largest kidney dialysis company, based on publicly reported sales and number of patients treated. The Company provides dialysis treatment and related dialysis care services to persons who suffer from end-stage renal disease (“ESRD”), as well as other health care services. The Company provides dialysis products for the treatment of ESRD, including products manufactured and distributed by the Company such as hemodialysis machines, peritoneal cyclers, dialyzers, peritoneal solutions, hemodialysis concentrates, solutions and granulates, bloodlines, renal pharmaceuticals and systems for water treatment. The Company supplies dialysis clinics it owns, operates or manages with a broad range of products and also sells dialysis products to other dialysis service providers. The Company describes its other health care services as “Care Coordination.” Care Coordination currently includes the coordinated delivery of pharmacy services, vascular, cardiovascular and endovascular specialty services, non-dialysis laboratory testing services, physician services, hospitalist and intensivist services, health plan services, ambulatory surgery center services and urgent care services, which, together with dialysis care services represent the Company’s health care services.

Overview of Fresenius’s Conflict Minerals Program

In connection with its reporting under the Securities and Exchange Commission’s (“SEC”) Final Rule on Conflict Minerals the Company designed a program (“Conflict Minerals Program,” “the CM Program”), to capture the required data within our supply chain for analysis and disclosure. The CM Program also includes feedback and communication functions to ensure that the Conflict Minerals Program also enhanced our knowledge of the suppliers to ensure that we were continually evaluating the compatibility of their business practices with our established practices. The CM Program was upgraded to conform in all material respects to the Organization for Economic Co-operation and Development (“OECD”) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, 3rd Edition and related Supplements on Tin, Tantalum and Tungsten and on Gold (“OECD Guidance”). The OECD Guidance contains the following five-step framework:

1. Establish strong company management systems
2. Identify and assess risks in our supply chain
3. Design and implement a strategy to respond to identified risks
4. Support the development and implementation of independent third party audits of smelters’ and refiners’ sourcing
5. Report on supply chain due diligence

Conflict Minerals Sourcing Policy

Our Conflict Minerals Sourcing Policy (“CM Policy”) governs the sourcing of raw materials, including those materials identified from areas of the world which have been identified as Covered Countries by Rule 13p-1 under the Securities Exchange Act of 1934, as amended, the CM Program adopted by the SEC pursuant to the Dodd Frank Wall Street Reform and Consumer Protection Act. The Company also sources components, or other materials, that may potentially contain an identified Conflict Mineral. Our CM Policy is publicly available at:

http://www.freseniusmedicalcare.com/fileadmin/data/com/pdf/About_us/Responsibility/Policy_Conflict_Minerals.pdf.

Description of Supply Chain

We operate state-of-the-art production facilities worldwide to meet the demand for our dialysis products. We have invested significantly in developing proprietary processes, technologies and manufacturing equipment which we believe provide a competitive advantage in manufacturing our products, while our strategically located production and distribution centers help to reduce transport costs.

Our Global Manufacturing and Quality (“GMQ”) division manages all of Fresenius Medical Care’s activities in purchasing of raw materials and semi-finished goods used in manufacturing activities and production including quality management. This centralized approach enables us to:

- continuously enhance the efficiency of our processes,
- optimize cost structures,
- improve returns on our capital invested in manufacturing,
- respond more flexibly, and
- fulfill our commitment to meeting high quality and safety standards.

Our procurement policy combines worldwide sourcing of high-quality materials with the establishment of long-term supplier relationships. Additionally, we carefully assess the reliability of all materials purchased to ensure that they comply with the rigorous quality and safety standards required for our dialysis products. We outsource only if we have confirmed that a supplier can meet or exceed our internal standards. An interactive information system connects all our global procurement activities to ensure standardized processes and constant monitoring of our projects.

We focus on further optimizing procurement logistics and reducing total purchasing costs. Supplemental raw material contracts for all manufacturers of semi-finished goods will enable us to improve purchasing terms for our complete network. However, as we are an original equipment manufacturer that assembles and manufactures components and sub-components into finished products, we are largely removed from the processing facilities in our supply chain with regards to conflict minerals and we must rely on the information provided by our suppliers through various due diligence processes.

Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report, Exhibit

Reasonable Country of Origin Inquiry Conclusion:

The Company performed due diligence to determine the source and chain of custody of the conflict minerals necessary to the production or functionality of certain of its products. However, for 2016, the Company determined in good faith that it was unable to definitively ascertain whether the conflict minerals, necessary for the functionality or production of the relevant products manufactured or contracted to manufacture by the Company, financed or benefitted armed groups in the Democratic Republic of the Congo (“DRC”) or in the countries having an internationally recognized border with the DRC, including Angola, Burundi, Central African Republic, Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda, and Zambia (together the “Covered Countries”).

Description of Reasonable Country of Origin Inquiry

Our Reasonable Country of Origin Inquiry (“RCOI”) was conducted, in good faith, through the collection of conflict minerals data from suppliers that we determined to be at-risk for potentially containing the identified minerals in the products that they provided to us during 2016. These products are enumerated

in the Conflict Minerals Report filed as Exhibit 1.01 to this Form SD. Moreover, our RCOI was developed based upon industry best practices in collaboration with a third-party consultant (iPoint, Inc.).

Our RCOI conflict minerals data collection process includes, but is not limited to, the following:

1. Develop and distribute free, educational material and training to relevant suppliers
2. Initiate survey campaign from relevant suppliers utilizing the cross-industry Conflict Minerals Reporting Template ("CMRT"), developed by the Conflict Free Sourcing Initiative ("CFSI"), as well as the iPoint Conflict Minerals Platform ("iPCMP")
3. Compare conflict minerals data received from relevant suppliers to Country of Origin ("CoO") information available to us via our membership to the CFSI

A copy of our Conflict Minerals Report is filed as Exhibit 1.01 hereto and is publicly available at <http://www.freseniusmedicalcare.com/en/about-us/responsibility/>.

Item 1.02 Exhibits

Section 2 — Exhibits

Item 2.01 Exhibits

The following exhibit is filed as part of this report.

Exhibit 1.01 — Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Fresenius Medical Care AG & Co. KGaA

Conflict Minerals Report

This document, constituting Exhibit 1.01 to Form SD of Fresenius Medical Care AG & Co. KGaA (together with its subsidiaries, "Fresenius Medical Care," "the Company," "we," "our"), for calendar year 2016, is the Company's Conflict Minerals Report in accordance with Rule 13p-1 under the Securities Exchange Act of 1934. As the Company has shares listed on the New York Stock Exchange, it is subject to the provisions of Section 1502 of the U.S. Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank Act") relating to "Conflict Minerals." Section 1502 of the Dodd-Frank Act and Rule 13p-1 of the Securities Exchange Commission ("SEC") address the sourcing of tin, tantalum, tungsten, and gold ("3TG minerals") from the Democratic Republic of the Congo ("DRC") and adjoining countries ("Covered Countries") which are known locations where armed groups mine and sell these minerals to finance civil violence.

The following is a description of the measures taken by the Company, a registrant, to exercise due diligence on the source and chain of custody of the subject minerals.

Section (1) Due Diligence:

The Company's comprehensive Conflict Minerals Program ("CM Program") includes a due diligence process that was designed to conform, in all material respects, to the criteria set forth in the internationally recognized Organization for Economic Co-operation and Development ("OECD") Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, 3rd Edition and related Supplements on Tin, Tantalum and Tungsten and on Gold ("OECD Guidance").

The following is a review of the actions comprising the OECD Guidance five-step framework that the Company took to implement our due diligence process:

1. Establish strong company management systems
 - a. The Company developed and adopted a Conflict Minerals Sourcing Policy and made it publicly available at http://www.freseniusmedicalcare.com/fileadmin/data/com/pdf/About_us/Responsibility/Policy_Conflict_Minerals.pdf.
 - b. The Company structured internal management to support supply chain due diligence by identifying the responsible business organizations and the individuals within those organizations and establishing a cross-functional Conflict Minerals team ("the Team"). The primary and secondary contributors on the Team were designated and notified of their responsibilities. Education was also provided via training to not only the Team, but also the relevant personnel at the Company and is available on the Company's intra-net.
 - c. The Company established a system of controls over the supply chain by leveraging the iPoint Conflict Minerals Platform ("iPCMP") developed by our consultant, iPoint, Inc., to monitor all relevant data.
 - d. The Company strengthened and improved supplier engagement over previous years by creating a free, educational training video with links to additional free resources. The Company also provided suppliers feedback regarding their smelter data.

- e. The Company developed a grievance mechanism in the form of an email inbox, available to the public at cminquiry@fmc-ag.com.
2. Identify and assess risk in the supply chain
 - a. The Company identified risk in the supply chain by identifying the product categories that are at-risk of containing conflict minerals. After determining the applicable product categories, the Company was then able to determine the facilities that manufactured those products, and identified the suppliers that provided relevant materials for the manufacture of those products.
 - b. The Company's method for identifying risk of potential financing or benefitting of armed groups is an evolving and ongoing process.
3. Design and implement a strategy to respond to risks
 - a. The Team communicates with senior leadership any material risk that may be in the supply chain, in addition to ad-hoc meetings to review program progress.
 - b. The Company devised and implemented a risk-management strategy by evaluating suppliers for compliance. In order to be considered non-compliant, a supplier was either unresponsive, non-compliant with our policy or did not meet our expectations. For a supplier to be considered at-risk, they were either non-compliant or provided smelter data that indicated potential risk. At-risk suppliers were then escalated to the Team for further review on an individual supplier basis.
 - c. As part of the strategy to respond to risk, the Team provided educational risk management training that included the escalation process as a topic to the relevant personnel.
 - d. The Team was able to identify, monitor and track performance of their risk mitigation efforts and included that information in the meetings with senior leadership utilizing iPCMP for identification, monitoring and tracking performance.
 - e. Risk mitigation processes were enhanced this year as an improvement on previous years' efforts, specifically by notifying all non-compliant suppliers of their non-compliance and our classification of the status within iPCMP so that the data may be used in the future.
4. Support the development and implementation of independent third party audits of smelters' and refiners' sourcing
 - a. The Company is a member of the Conflict Free Sourcing Initiative ("CFSI") which conducts independent third-party audits of smelters on behalf of its members. The Company utilizes the RCOI information provided to members of the CFSI in order to determine the possible country of origin of the conflict minerals necessary for the functionality or production of its products.
5. Report on supply chain due diligence
 - a. The Company reports annually to the SEC on Form SD.
 - b. The Company makes its Conflict Minerals Report publicly available at <http://www.freseniusmedicalcare.com/en/about-us/responsibility/>.

Steps taken and being taken to mitigate risk:

The Company has made significant improvements in its year-on-year performance. Our process-related improvements primarily focused on adopting a risk-based approach as noted below:

- Improved our risk identification process for the supply chain
- Implemented additional steps enabling effective, targeted communications to the supply chain
- Enhanced our internal escalation, data analytics and processes enabling efficient and effective communication

The most significant resulting improvement over the previous reporting year was mitigating risk through CFSI's narrowing of the possible countries of origin by 64%, 66%, 70% and 66% for gold, tantalum, tin and tungsten, respectively.

The content of any website referred to in this Report is included for general information only and is not incorporated by reference to this Report.

(1) Product Description:

The Company has determined, in good faith, that the applicable product categories are the following:

Hemodialysis machines and Peritoneal Dialysis cyclers

Body Composition Monitor ("BCM")

HD machines and PD cyclers:

Hemodialysis machines are used to control the flow of blood from the patient to a specially designed filter known as a dialyzer. The dialyzer separates waste products and excess water from the blood. Dialysis solution flowing through the dialyzer carries away the waste products and excess water, and supplements the blood with solutes which must be added due to renal failure while the treated blood is returned to the patient. The hemodialysis machine pumps blood, adds anti-coagulants, regulates the purification process and controls the mixing of dialysis solution and the rate of its flow through the system. This machine can also monitor and record the patient's vital signs.

Peritoneal Dialysis is a treatment modality that uses the patient's peritoneum as a dialyzing membrane. In peritoneal dialysis, a surgically implanted catheter provides access to the patient's peritoneal cavity. A peritoneal dialysis cycler is a machine that pumps or "cycles" solution to and from the patient's peritoneal cavity while the patient sleeps. We produce and assemble hemodialysis machines and peritoneal dialysis cyclers at the Fresenius Medical Care facilities in Schweinfurt, Germany and Concord, California.

Body Composition Monitor:

Our Body Composition Monitor ("BCM") is sold as part of both our peritoneal and hemodialysis products. It is an analysis system that is used to determine a patient's body composition (water, body mass and fat), which assesses a patient's hydration state to assist in determining the patient's dialysis therapy. The BCM quantifies an individual's fluid status and nutritional parameters non-invasively. BCMs are manufactured and assembled in Schweinfurt, Germany.

(2) Product Determination:

Pursuant to guidance issued by the SEC Division of Corporation Finance on April 29, 2014, we are not required to describe any of our products as "DRC Conflict Free," as having "not been found to be 'DRC Conflict Free'" or as "DRC Conflict Undeterminable." In addition, inasmuch as we have not voluntarily

elected to describe any of our products as DRC conflict free, the requirement for an independent private sector audit of this report is not applicable.

Results of our RCOI and Due Diligence Measures:

Tables 1 reflects the result of our RCOI and due diligence. The countries listed in the table are potential sources of origin of the conflict minerals necessary for the functionality or manufacture of the products identified above in “Product Description,” according to the CFSI data available to us as CFSI members.

The smelters and refiners, as declared by our supply chain can be found in Annex I.
