Introduction

Company Overview

Fresenius Medical Care AG & Co. KGaA (“FMC-AG & Co. KGaA,” the “Company,” “we,” “us,” or “our”), a German partnership limited by shares, is the world’s largest kidney dialysis company, based on publicly reported sales and number of patients treated. We provide dialysis care and related services to persons who suffer from end stage renal disease (“ESRD”) as well as other health care services. We develop and manufacture a wide variety of health care products, which includes both dialysis and non-dialysis products. Our dialysis products include dialysis machines, water treatment systems and disposable products while our non-dialysis products include acute cardiopulmonary and apheresis products. We sell our health care products to customers in around 150 countries and we also use them in our own health care service operations. Our dialysis business is therefore vertically integrated. We describe certain other health care services that we provide in our North America operating segment and our Asia-Pacific operating segment as “Care Coordination.” Care Coordination currently includes, but is not limited to, coordinated delivery of pharmacy services, vascular, cardiovascular and endovascular specialty services as well as ambulatory surgery center services, physician nephrology and cardiology services, health plan services, urgent care services and ambulant treatment services. Care Coordination also includes the coordinated delivery of emergency, intensivist and hospitalist physician services as well as transitional care which we refer to as “hospital related physician services.” All of these Care Coordination services together with dialysis care and related services represent our health care services. We estimated the volume of the global dialysis market was approximately €70 billion in 2017. Due to the complexity and evolving nature of Care Coordination services, we are currently unable to estimate the global volume of this market. Dialysis patient growth results from factors such as the aging population and increased life expectancies; shortage of donor organs for kidney transplants; increasing incidence of kidney disease and better treatment of and survival of patients with diabetes, hypertension and other illnesses, which frequently lead to the onset of chronic kidney disease; improvements in treatment quality, new pharmaceuticals and product technologies, which prolong patient life; and improving standards of living in developing countries, which make life-saving dialysis treatment available. We are also engaged in different areas of health care research.

Overview of Fresenius’s Conflict Minerals Program

In connection with its reporting under the Securities and Exchange Commission’s (“SEC”) Final Rule on Conflict Minerals the Company designed a program (“Conflict Minerals Program,” “the CM Program”), to capture the required data within our supply chain for analysis and disclosure. The CM Program also includes feedback and communication functions to ensure that the Conflict Minerals Program also enhanced our knowledge of the suppliers to ensure that we were continually evaluating the compatibility of their business practices with our established practices. The CM Program was upgraded to conform in all material respects to the Organization for Economic Co-operation and Development (“OECD”) Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, 3rd Edition and related Supplements on Tin, Tantalum and Tungsten and on Gold (“OECD Guidance”). The OECD Guidance contains the following five-step framework:

1. Establish strong company management systems
2. Identify and assess risks in our supply chain
3. Design and implement a strategy to respond to identified risks
4. Support the development and implementation of independent third-party audits of smelters’ and refiners’ sourcing
5. Report on supply chain due diligence

Conflict Minerals Sourcing Policy

Our Conflict Minerals Sourcing Policy (“CM Policy”) governs the sourcing of raw materials, including those materials identified from areas of the world which have been identified as Covered Countries by Rule 13p-1 under the Securities Exchange Act of 1934, as amended, the CM Program adopted by the SEC pursuant to the Dodd Frank Wall Street Reform and Consumer Protection Act. The Company also sources components, or other materials, that may potentially contain an identified Conflict Mineral. Our CM Policy is publicly available at:

https://www.freseniusmedicalcare.com/fileadmin/data/com/pdf/About_us/Responsibility/Policy_Conflict_Minerals.pdf.

Description of Supply Chain

We operate production facilities worldwide to meet the demand for our dialysis products. We have invested significantly in developing proprietary processes, technologies and manufacturing equipment which we believe provide a competitive advantage in manufacturing our products, while our strategically located production and distribution centers help to reduce transport costs.

Our Global Manufacturing and Quality (“GMQ”) division manages all of our activities in purchasing of raw materials and semi-finished goods used in manufacturing activities, production (including quality management) and distribution in North America. This centralized approach enables us to:

- continuously enhance the efficiency of our processes,
- optimize cost structures,
- improve returns on our capital invested in manufacturing,
- respond more flexibly, and
- fulfill our commitment to meeting high quality and safety standards

Our procurement policy combines worldwide sourcing of high-quality materials with the establishment of long-term supplier relationships. Additionally, we carefully assess the reliability of all materials purchased to ensure that they comply with the rigorous quality and safety standards required for our dialysis products. We outsource only if we have confirmed that a supplier can meet or exceed our internal standards. An interactive information system connects all our global procurement activities to ensure standardized processes and constant monitoring of our projects.

We focus on further optimizing procurement logistics and reducing total purchasing costs. Supplemental raw material contracts for all manufacturers of semi-finished goods will enable us to improve purchasing terms for our complete network. However, as we are an original equipment manufacturer that assembles and manufactures components and sub-components into finished products, we are largely removed from the processing facilities in our supply chain with regards to conflict minerals and we must rely on the information provided by our suppliers through various due diligence processes.

Section 1 - Conflict Minerals Disclosure

Item 1.01 Conflict Minerals Disclosure and Report, Exhibit

Reasonable Country of Origin Inquiry Conclusion:

The Company performed due diligence to determine the source and chain of custody of the conflict minerals necessary to the production or functionality of certain of its products. However, for 2017, the Company determined in good faith that it was unable to definitively ascertain whether the conflict minerals, necessary for the functionality or production of the relevant products manufactured or contracted to manufacture by the Company, financed or benefitted armed groups in the Democratic Republic of the Congo (“DRC”) or in the countries having an internationally recognized border with the DRC, including Angola, Burundi, Central African Republic, Republic of the Congo, Rwanda, South Sudan, Tanzania, Uganda, and Zambia (together the “Covered Countries”).

Description of Reasonable Country of Origin Inquiry

Our Reasonable Country of Origin Inquiry (“RCOI”) was conducted, in good faith, through the collection of conflict minerals data from suppliers that we determined to be at-risk for potentially containing the identified minerals in the products that they provided to us during 2017. These products are enumerated in the Conflict Minerals Report filed as Exhibit 1.01 to this Form SD. Moreover, our RCOI was developed based upon industry best practices in collaboration with a third-party consultant (iPoint, Inc.).

Our RCOI conflict minerals data collection process includes, but is not limited to, the following:

1. Develop and distribute free, educational material and training to relevant suppliers
2. Initiate survey campaign from relevant suppliers utilizing the cross-industry Conflict Minerals Reporting Template (“CMRT”), developed by the Responsible Minerals Initiative (“RMI”), formerly known as the Conflict Free Sourcing Initiative (“CFSI”), as well as the iPoint Conflict Minerals Platform (“iPCMP”)
3. Compare conflict minerals data received from relevant suppliers to Country of Origin (“CoO”) information available to us via our membership to the RMI

A copy of our Conflict Minerals Report is filed as Exhibit 1.01 hereto and is publicly available at <https://www.freseniusmedicalcare.com/en/about-us/responsibility/>.

Item 1.02 Exhibits

Section 2 — Exhibits

Item 2.01 Exhibits

The following exhibit is filed as part of this report.

Exhibit 1.01 — Conflict Minerals Report as required by Items 1.01 and 1.02 of this Form.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the duly authorized undersigned.

Fresenius Medical Care AG & Co. KGaA

Conflict Minerals Report

This document, constituting Exhibit 1.01 to Form SD of Fresenius Medical Care AG & Co. KGaA (together with its subsidiaries, "Fresenius Medical Care," "the Company," "we," "our"), for calendar year 2017, is the Company's Conflict Minerals Report in accordance with Rule 13p-1 under the Securities Exchange Act of 1934. As the Company has shares listed on the New York Stock Exchange, it is subject to the provisions of Section 1502 of the U.S. Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank Act") relating to "Conflict Minerals." Section 1502 of the Dodd-Frank Act and Rule 13p-1 of the Securities Exchange Commission ("SEC") address the sourcing of tin, tantalum, tungsten, and gold ("3TG minerals") from the Democratic Republic of the Congo ("DRC") and adjoining countries ("Covered Countries") which are known locations where armed groups mine and sell these minerals to finance civil violence.

The following is a description of the measures taken by the Company, a registrant, to exercise due diligence on the source and chain of custody of the subject minerals.

Section (1) Due Diligence:

The Company's comprehensive Conflict Minerals Program ("CM Program") includes a due diligence process that was designed to conform, in all material respects, to the criteria set forth in the internationally recognized Organization for Economic Co-operation and Development ("OECD") Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, 3rd Edition and related Supplements on Tin, Tantalum and Tungsten and on Gold ("OECD Guidance").

The following is a review of the actions comprising the OECD Guidance five-step framework that the Company took to implement our due diligence process:

1. Establish strong company management systems
 - a. The Company developed and adopted a Conflict Minerals Sourcing Policy and made it publicly available at https://www.freseniusmedicalcare.com/fileadmin/data/com/pdf/About_us/Responsibility/Policy_Conflict_Minerals.pdf.
 - b. The Company structured internal management to support supply chain due diligence by identifying the responsible business organizations and the individuals within those organizations and establishing a cross-functional Conflict Minerals team ("the Team"). The primary and secondary contributors on the Team were designated and notified of their responsibilities, and training was provided to relevant personnel via remote-workshops.
 - c. The Company established a system of controls over the supply chain by leveraging the iPoint Conflict Minerals Platform ("iPCMP") developed by our consultant, iPoint, Inc., to monitor all relevant data.
 - d. The Company strengthened and improved supplier engagement over previous years by refining the free training made available to suppliers, as well as the delivery method for that training. The Company also provided feedback and engagement recommendations to suppliers that declared potential smelters or refiners in their supply chains.

- e. The Company maintains a grievance mechanism in the form of an email inbox, available to the public at cminquiry@fmc-ag.com, also accessible via <https://www.freseniusmedicalcare.com/en/about-us/responsibility/>.
2. Identify and assess risk in the supply chain
 - a. The Company identified risk in the supply chain by identifying the product categories that are at-risk of containing conflict minerals. After determining the applicable product categories, the Company was then able to determine the facilities that manufactured those products and identified the suppliers that provided relevant materials for the manufacture of those products.
 - b. For a supplier to be considered at-risk, they were either non-compliant or provided smelter data that indicated potential risk. At-risk suppliers were then escalated to the Team for further review on an individual supplier basis. The Company's method for identifying risk of potential financing or benefitting of armed groups is an evolving and ongoing process.
 3. Design and implement a strategy to respond to risks
 - a. The Team communicates with senior leadership, on a yearly basis, any material risk that may be in the supply chain, in addition to ad-hoc meetings to review program progress.
 - b. The Company devised and implemented a risk-management strategy by evaluating suppliers for compliance. In order to be considered non-compliant, a supplier was either unresponsive, non-compliant with our policy or did not meet our expectations. In an improvement from previous years, the Company cross-checked the applicable suppliers with the list of applicable suppliers from the previous reporting year. In instances where a supplier was applicable in the previous reporting year, as well as reporting year 2017, and did not provide sufficient data in the previous reporting year, that supplier was categorized with a different risk status. These suppliers were then solicited for data and monitored with a higher priority.
 - c. As part of the strategy to respond to risk, the Team provided educational risk management training that included the escalation process as a topic to the relevant personnel.
 - d. The Team was able to identify, monitor and track performance of their risk mitigation efforts and included that information in the meetings with senior leadership utilizing iPCMP for identification, monitoring and tracking performance.
 - e. As noted in 3.b of this document, risk mitigation processes were enhanced this year as an improvement on previous years' efforts, specifically by notifying all non-compliant suppliers of their non-compliance and our classification of the status within iPCMP so that the data may be used in the future.
 4. Support the development and implementation of independent third-party audits of smelters' and refiners' sourcing
 - a. The Company is a member of the Responsible Minerals Initiative ("RMI"), formerly known as the Conflict Free Sourcing Initiative ("CFSI") which conducts independent third-party audits of smelters on behalf of its members. The Company utilizes the RCOI information provided to members of the RMI to determine the possible country of origin of the conflict minerals necessary for the functionality or production of its products.
 5. Report on supply chain due diligence
 - a. The Company reports annually to the SEC on Form SD.

- b. The Company makes its Conflict Minerals Report publicly available at <http://www.freseniusmedicalcare.com/en/about-us/responsibility/>.

Steps taken and being taken to mitigate risk:

The Company has taken a number of steps to (i) mitigate the risk that its necessary conflict minerals benefit armed groups in the DRC and/or Covered Countries and (ii) to improve its due diligence. Those steps include, but are not limited to:

- Improving the free training material made available to suppliers
 - Improving the delivery mechanism of the training material to suppliers
 - Increasing the number of languages within our RCOI requests to ensure ease of use for our suppliers
 - Enhancing our internal risk reporting method to enable more precise risk mitigation
 - Notifying suppliers of at-risk smelters or refiners that may exist in their proprietary supply chains
- Implementing a Corporate Social Responsibility (“CSR”) Report into the Company’s annual report to demonstrate commitment to social and economic issues globally, while also increasing the transparency of the Company’s efforts (the Company’s 2017 annual report can be found at: https://www.freseniusmedicalcare.com/fileadmin/data/com/pdf/investors/News_Publications/Annual_Reports/2017/FME_Annual_Report_2017.pdf)

The content of any website referred to in this Report is included for general information only and is not incorporated by reference to this Report.

(1) Product Description:

The Company has determined, in good faith, that the applicable product categories are the following:

Hemodialysis machines and Peritoneal Dialysis cyclers

Body Composition Monitor (“BCM”)

HD machines and PD cyclers:

Hemodialysis machines are used to control the flow of blood from the patient to a specially designed filter known as a dialyzer. The dialyzer separates waste products and excess water from the blood. Dialysis solution flowing through the dialyzer carries away the waste products and excess water, and supplements the blood with solutes which must be added due to renal failure while the treated blood is returned to the patient. The hemodialysis machine pumps blood, adds anti-coagulants, regulates the purification process and controls the mixing of dialysis solution and the rate of its flow through the system. This machine can also monitor and record the patient’s vital signs.

Peritoneal Dialysis is a treatment modality that uses the patient’s peritoneum as a dialyzing membrane. In peritoneal dialysis, a surgically implanted catheter provides access to the patient’s peritoneal cavity. A peritoneal dialysis cycler is a machine that pumps or “cycles” solution to and from the patient’s peritoneal cavity while the patient sleeps. We produce and assemble hemodialysis machines and peritoneal dialysis cyclers at the Fresenius Medical Care facilities in Schweinfurt, Germany and Concord, California.

Body Composition Monitor:

Our Body Composition Monitor (“BCM”) is sold as part of both our peritoneal and hemodialysis products. It is an analysis system that is used to determine a patient’s body composition (water, body mass and fat), which assesses a patient’s hydration state to assist in determining the patient’s dialysis therapy. The BCM quantifies an individual’s fluid status and nutritional parameters non-invasively. BCMs are manufactured and assembled in Schweinfurt, Germany.

(2) Product Determination:

Pursuant to guidance issued by the SEC Division of Corporation Finance on April 29, 2014, we are not required to describe any of our products as “DRC Conflict Free,” as having “not been found to be ‘DRC Conflict Free’” or as “DRC Conflict Undeterminable.” In addition, inasmuch as we have not voluntarily elected to describe any of our products as DRC conflict free, the requirement for an independent private sector audit of this report is not applicable.

Results of our RCOI and Due Diligence Measures:

Table 1 reflects the result of our RCOI and due diligence. The countries listed in the table are potential sources of origin of the conflict minerals necessary for the functionality or manufacture of the products identified above in “Product Description,” according to the RMI data available to us as RMI members.

The smelters and refiners, as declared by our supply chain can be found in Annex I.
