Spend your days your way

Home Haemodialysis
Most people who perform home haemodialysis extend their treatment time per week. This can be done by performing their therapy more frequently on 4–7 days a week and/or performing their treatment overnight.

More frequent haemodialysis is associated with:
- Less stress on your heart\(^1\)
- Better blood pressure control with fewer medications\(^2\)
- Improved appetite\(^3\)

Feeling of Flexibility
The flexibility home haemodialysis enables, gives you the freedom to spend more time being you. Whether your passion is fishing or travelling, more frequent haemodialysis gives you flexibility to live your life better!

More frequent haemodialysis is associated with:
- More energy\(^4,5\)
- Quicker recovery time after treatment\(^6\)
- Flexibility to take control of your life\(^9,10\)

Feeling of Control
Kidney failure is a serious health challenge. Frequent home is associated with improved survival. Overnight has been associated with comparable survival than deceased donor kidney transplantation\(^7,8\).

Frequent Home HD provides you the opportunity to celebrate more of what life can offer!
Talk to your physician

Talk to your physician today to see if home haemodialysis during the day or overnight is right for you. Together, you can choose a system that works best for your lifestyle and individual treatment requirements.
